**2011 CHIRP Data Report**  
**Clients by Insurance and Care Coordination Level**  
**October 2009 - September 2010**

The table on the next tab shows the insurance status and care coordination level for all HCP clients receiving care coordination services in the federal contract year ending September 2010. Only the most recently entered insurance is included here. Current insurance data does not permit identifying those clients with more than one type of coverage in place.

These data only reflect the population of CSHCN served by HCP local offices and are not directly comparable to other data sources, including state and national surveys. You may make such comparisons as long as you understand the limitations of doing so. National and state surveys use a randomly selected sample that is statistically representative of the CSHCN population as a whole for the geographic area included in the study. The data included here are from information entered by HCP local offices about the actual families and children in Colorado with whom they connected at any time during the specified period

HCP designates a level from I to III for care coordination using the following criteria:

Level I -

- Phone log entry

OR

- HCP Program Screen without Effective Date (Used for notifications from CRCSN and NBH).

Level II -

- HCP Program Screen with an Effective date
- Communications and Referrals documented

Level III -

- HCP Program Screen with an Effective date
- Communications and Referrals documented
- Active Care Plan documented

**NOTE:** *If a record does not have a HCP Program Screen or there isn't an Effective Date, it is always considered Level I Care Coordination.*
